

A call to action:

Striving for racial justice in academic biology

Actionable steps toward equity in STEM

In this interactive discussion, using a combination of presentations, case studies, and breakouts, you will work with colleagues to develop and refine your command of *Conceptual Frameworks* and the *Challenges and Opportunities* relevant to our work to make our disciplines more inclusively excellent. Rather than promising 'answers' or a 'tool box,' our goal is for you to leave the workshop with concepts and critical questions that will help you see the problem with 'new eyes,' hopefully enabling you to more effectively identify and change existing practices, policies, beliefs, and assumptions that maintain inequities in STEM.

An initiative sponsored by the Society for the Advancement in Biology Education Research (SABER) focused on promoting awareness, understanding and commitment to change academic biology environments to be more inclusive and strive for racial justice in STEM education. We are excited that speakers will be compensated for their time and this event is co-sponsored by Arizona State University's HHMI Inclusive Excellence Project, SEISMIC Collaboration, and University of California Santa Barbara.
